

HORIZON BANK DESIGN · TWO-PAGE GUIDE

Design credible banking experiences with a better first ask.

You do not need to know how skills work. Tell Codex what you want to create or improve, add the Horizon Bank Design plugin, and refine the result in plain language.

One plugin. Many starting points.

Begin with a rough idea, screenshot, design brief, or existing app. The plugin can help shape concepts, components, flows, code, and design reviews.

Start in three steps

1

Start a new Codex task

Open a fresh task so Codex can load the latest installed plugin and its design skills.

2

Add the plugin

Choose [@horizon-bank-design](#) from Plugins, or say “Use the Horizon Bank Design plugin.”

3

Describe the outcome

Name the screen or flow, audience, important content, states, and the output you want.

A plugin is a bundle. Skills do the work.

You can ask normally. Codex routes creation and review work to the appropriate Horizon skill.

Horizon Bank
Design plugin

Build Horizon Bank UI

Audit Horizon Bank UI

Identity and tokens

Banking components

Accessible patterns

Visual UI audits

A strong brief is four lines,
not four pages.

- Name the primary task
- Ask for edge states

- List must-show information
- Choose concept, code, or review

MAKE IT YOUR OWN

Shape the result with four choices.

The plugin is a design system and reasoning guide, not a rigid template. Change the starting point, surface, depth, and deliverable while keeping the Horizon Bank character coherent.

Prompt formula

Use Horizon Bank Design to **[create, adapt, or audit]** a **[screen or flow]** for **[audience]**. Include **[content and states]**. Deliver **[concept, code, or review]**.

Malleable by design

Turn any of these dials without losing the core system.

Starting point

Blank brief · screenshot · rough wireframe · existing code

Surface

Desktop web · responsive web · mobile concept · internal tool

Depth

Concept · component set · complete flow · implementation · QA

Banking need

Accounts · cards · transfers · lending · servicing · delegated payments

Emphasis

Editorial · task-first · data-dense · trust and approval

Copy, paste, and remix

DASHBOARD

Use Horizon Bank Design to create a responsive account dashboard with checking, savings, cards, quick actions, recent activity, and useful empty and error states.

MONEY MOVEMENT

Design a transfer flow from amount entry through review and durable confirmation. Show source, destination, fees, timing, and recovery paths.

CREDIT CARD

Create a credit-card detail page with current balance, available credit, payment due, rewards, transactions, card controls, and mobile behavior.

ADAPT EXISTING WORK

Refactor this React page into Horizon Bank styling. Preserve the information architecture, apply the bundled tokens and assets, and improve accessibility.

VISUAL AUDIT

Audit this screenshot against Horizon Bank design guidance. Prioritize identity, hierarchy, typography, spacing, financial clarity, interaction states, and accessibility.

ADVANCED TRUST

Create a purchase-approval surface showing requester, merchant, items, total, delivery, expiration, exact scope, approval, rejection, and revocation controls.

A USABLE START

“Make a bank dashboard.”

A STRONGER ASK

“Use Horizon Bank Design to create a responsive checking dashboard for customers who scan balances and recent activity. Include quick actions, pending and posted transactions, alerts, loading, empty, and error states. Deliver working HTML and CSS, then visually audit it.”

Tip

Iterate conversationally: “make it denser,” “show the mobile version,” “use less red,” “add edge states,” or “audit this before we share it.”
