

HORIZON BANK DESIGN PLUGIN

Create credible banking experiences.

Tell your coding agent what you want to create or improve, add the Horizon Bank Design plugin, and refine the result in plain language.

One plugin.
Four ways to create.

Begin with a rough idea, screenshot, design brief, existing app, or asset need.
The plugin can build, audit, visualize, and generate.

Start in three steps

1 Start a new Coding task Open a fresh task so Codex loads the latest installed plugin and all four skills.	2 Add the plugin Choose @horizon-bank-design from Plugins, or say "Use the Horizon Bank Design plugin."	3 Describe the outcome Name the screen, flow, asset, audience, important states, dimensions, and output you want.
--	--	--

A plugin is a bundle. Skills do the work.

Ask normally. Your agent routes creation, review, mockup, and asset work to the appropriate Horizon skill.

BUILD UI Design and implement	AUDIT UI Review and prioritize
MOCKUPS Visualize screens and flows	ASSET CREATION Photography and icons

BUILD Responsive UI + code	AUDIT QA the design	MOCK UP Concept screens + flows	GENERATE Hero images + icons
A strong brief is four lines, not four pages.		- Name the primary task - List must-show content	- Ask for edge states - Choose the deliverable

Shape the result with five choices.

The plugin is a design system and reasoning guide, not a rigid template. Change the starting point, skill lane, placement, depth, and banking need while keeping the Horizon Bank character coherent.

Prompt formula

Use Horizon Bank Design to [build, audit, mock up, or generate an asset for] a [screen, flow, or placement] for [audience]. Include [content, states, or dimensions]. Deliver [code, review, mockup, image, or SVG].

Malleable by design

Turn any of these dials without losing the core system.

Starting point

Blank brief · screenshot · rough wireframe · existing code

Skill lane

Build · audit · mockup · asset generation

Surface or placement

Desktop web · mobile concept · hero · article · icon

Depth or fidelity

Concept · flow · implementation · QA · production asset

Banking need

Accounts · cards · transfers · lending · servicing · approvals

Copy, paste, and remix

DASHBOARD Create a responsive account dashboard with balances, quick actions, recent activity, and useful empty and error states.	MONEY MOVEMENT MOCKUP Create a high-fidelity transfer journey from amount entry through review, recovery, and durable confirmation.
HERO PHOTOGRAPHY Generate a wide first-home-planning hero with warm daylight, credible emotion, and copy space derived from my layout.	NEW ICON Create a subscription-control icon. Search the library first; if new, deliver a clean SVG and transparent 512×512 PNG.
ADAPT EXISTING WORK Refactor this React page into Horizon styling. Preserve the information architecture, apply the tokens and assets, and improve accessibility.	VISUAL AUDIT Audit this screenshot against Horizon guidance. Prioritize identity, hierarchy, financial clarity, interaction states, and accessibility.

Examples are optional.

Attach visual or layout examples when useful; the bundled Horizon references are enough to begin.

A USABLE START

“Make a bank dashboard.”

A STRONGER ASK

“Create a responsive checking dashboard, add a wide hero image with right-side copy space, include loading and error states, then visually audit the result.”

Tip

Iterate conversationally: “make it denser,” “show the mobile version,” “use less red,” “add copy space,” or “audit this before we share it.”
